Area economic conditions and growth

Public-private approaches

Economic feasibility and economic impact studies

Developing and assessing economic development initiatives

Commercial corridor studies

Sustainable building and development practices consulting

Economic development is an important function of government and varies in implementation from the revitalization of distressed areas to managing growth in strong areas, sometimes within the same jurisdiction.

Econsult Solutions, Inc. brings a breadth of knowledge gained from many years of executive level experience. Our personnel have directed economic development agencies of major cities, prepared economic development plans and strategies for a variety of jurisdictions, and conducted analyses for economic development agencies.

Econsult Solutions, Inc. can assist both government and private sector clients in strategic thinking and the efficient and successful implementation of programs and projects. We can work with groups to examine an area's economic strengths and weaknesses, as well as to assess the feasibility of economic development programs and project proposals. Our staff includes nationally recognized experts in urban economics, economic development, real estate economics and public finance.

We have worked across the spectrum of jurisdictions, from small townships to large cities and counties. Econsult Solutions, Inc. conducts pro-forma, cost benefit, economic impact, tax base, fiscal impact, retail, and other analyses using objective criteria. Our focus on economic analysis makes us a natural complement to urban planners, regional business coalitions, and engineering firms.

Our experts include:

- Steve Mullin
- Lee Huang
- Daniel Gundersen, M.G.A.
- Steven Spalding, MCRP
