Better Utilizing Investments to Leverage Development

Determining the costs, benefits, and positive impacts of large infrastructure projects requires rigorous data-driven analyses. Econsult Solutions, Inc. (ESI) provides applicants for the Better Utilizing Investments to Leverage Development (BUILD) Discretionary grants with the right support for submitting accurate, convincing, and competitive grant applications.

We work with public agencies to help them show to what extent their project will have positive economic, transportation, social, and environmental impacts and achieve the desired outcomes of the BUILD program. Key services include:

- Cost-Benefit Analyses.
- Review and analysis of applications prior to submission.
- Full preparation of application package.

ESI brings a wealth of experience as transportation experts and urban economists. We clearly understand the requirements and expectations of the commonwealth grant program administered by the Office of the Budget, and know how to present strong, solid cases to the evaluation committees.
